03 与传统补肾产品对比优势

04 成分配方的优势

05 原材料生产工艺

06 适用不同人群和效果总结

PART 01

产品基础信息

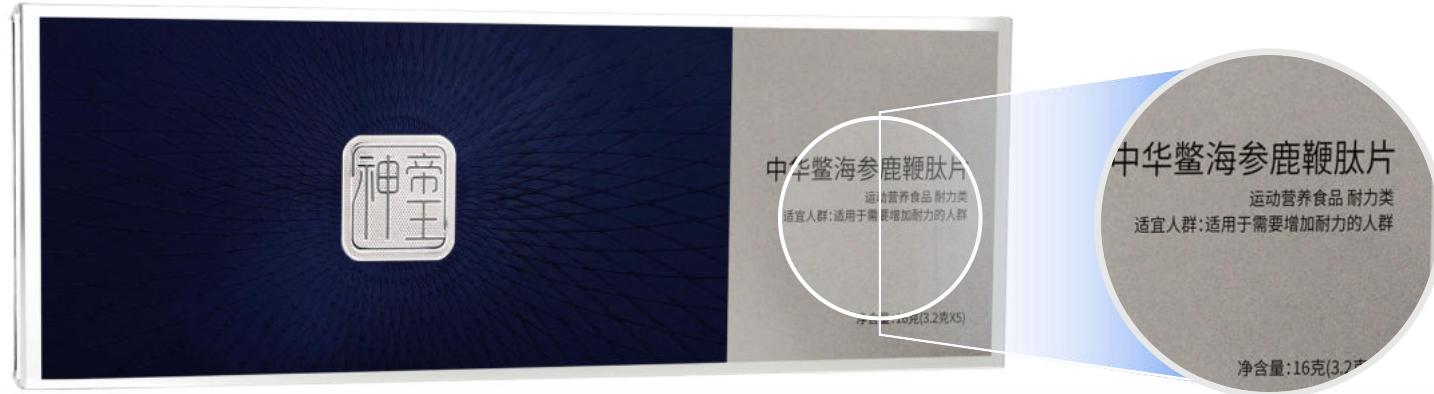

III 一、什么是特殊膳食？

特殊膳食食品是指为满足某些特殊人群的生理需求，或某些疾病患者的营养需求，食品生产企业按特殊配方而专门加工的食品。

简而言之：特膳食品具有丰富且有特殊的功能性、指向性的营养成分。这些成分在一些存在于普通食品中，但远远不如特膳食品富集度高。所以特膳更能满足特殊群体对特定的营养物质的需求。

III 一、什么是特殊膳食？

在发达国家，这种针对特殊人群的食品称为定向性食品。全球特膳食品的销售额已逾千亿美元。随着我国日益增加的健康需求，特殊膳食的前景非常广阔。

我国在2005年《预包装特殊膳食用食品标签通则》明确要求：特膳食品应在外包装上明确标示其有别于普通食品的特殊适用人群、针对性的特殊配方等标识。亦可合法宣传特殊人群的对特膳的需要。

III 二、产品概述

- ◆ **产品规格:** 5包/盒 4粒/包 20粒/盒
- ◆ **食用剂量:** 每日2粒 饭后一小时食用
- ◆ **产品类型:** 特殊膳食食品（耐力类片剂）
- ◆ **产品作用:** 运动营养补充品、提升耐力
- ◆ **零售价格:** 488元/盒
- ◆ **主要成分:** 黄精、蛹虫草、玛咖、鹿鞭肽（添加量5%）、海参（添加量5%）、人参、桑葚、龙眼肉、牡蛎、中华鳖（添加量5%）、杜仲雄花粉、养殖梅花鹿血冻干粉、养殖梅花鹿尾冻干粉、葛根、麦芽糊精、VB1、VB2（17种）
- ◆ **成分添加量:** 鹿鞭肽（添加量5%）、海参（添加量5%）、中华鳖（添加量5%）

珍贵成分，真实标注——不虚标、不隐藏，品质经得起检验

PART 02

核心成分与科学配比

III 一、黄金三角组合：科学配比激活男性原力

■ 鹿鞭肽:睾酮引擎，爆发力之源

自古为皇室壮阳圣品，《本草纲目》载其“补精髓，壮阳道”。耐力提升，动物实验证实鹿鞭肽多糖显著延长小鼠游泳时间，通过激活糖原储备系统，缓解运动性肌损伤。促进激素分泌，提升血清睾酮含量，改善勃起硬度及持久度。

■ 海参:细胞充电宝，代谢加速器

海参中的精氨酸含量为精子生成核心原料。

■ 中华鳖：血脉引擎，阴阳双补

帝王级滋补，《神农本草经》列其为上品，称“主伤中益气，补不足”。鳖甲多糖提升血红蛋白携氧量，显著降低血乳酸堆积，提高疲劳代谢物清除率。鳖肉胶原蛋白激活肾脏受体，调节肾素-血管紧张素系统，改善晨勃频率及性欲水平。

III 二、耐力提升的核心功效成分

黄精

蛹虫草

人参

葛根

VB1/VB2

补气养阴、增强体力，通过提高糖代谢效率延长运动耐力

改善肺功能，促进血氧交换，缓解运动缺氧。

大补元气，快速提升ATP（是各种活细胞内普遍存在的
一种高能磷酸化合物）合成效率，减少疲劳感。

扩张血管，加速乳酸代谢，延缓肌肉酸痛。

促进糖、脂肪转化为能量，减少运动后疲劳。

III 二、耐力提升的成分配伍方案

黄精+
人参
+VB族

黄精滋阴储能，人参快速供能；
VB₁ /VB₂ 加速代谢，形成“储能-爆发-持续”三重耐力链条。

维生素
B1/B
2

相当于身体里的“汽油添加剂”，
帮助把吃的饭快速变成能量，减
少运动后肌肉酸痛。

蛹虫草
+葛根
+鹿血

蛹虫草增强肺活量，葛根扩张血
管，鹿血提升携氧能力，实现
“吸氧-运氧-用氧”高效循环。

葛根 +
蛹虫草

葛根像血管疏通剂，让血液
流动更顺畅；蛹虫草增强肺
部吸氧能力，爬山、跑步时
呼吸更轻松。

人参+
玛咖

像充电宝一样快速补体力，人参
增强心脏泵血能力，玛咖调节内
分泌，让你运动时更持久不累。

III 三、男性机能增强的核心功效成分

鹿鞭肽

含天然雄激素前体，
直接刺激睾酮分泌，
提升勃起硬度。

海参

提供精氨酸（一氧化
氮前体）和锌，增强
精子活力及勃起功。

杜仲雄花粉

促进一氧化氮合成，
改善阴茎海绵体充血
效率。

玛咖

调节多巴胺分泌，
提升性欲，改善性
冷淡。

牡蛎

抑制PDE5酶活性，
促进阴茎血流，增
强勃起硬度，延长
勃起时间。

III 三、男性机能增强的成分配伍方案

01.鹿鞭肽+海参+牡蛎

鹿鞭肽促睾酮分泌，海参提供精氨酸促勃起，牡蛎抑制PDE5延长勃起，形成“激素-血流-神经”三重调控。

02.玛咖+杜仲雄花+桑葚

玛咖调节性欲，杜仲改善充血，桑葚保护生殖细胞，实现“欲望-能力-质量”全面提升。

03.鹿鞭肽+鹿血/鹿尾

相当于天然“雄性激素”，促进睾丸分泌睾酮，提升性欲和勃起硬度，类似给生殖系统“加油”。

III 三、男性机能增强的成分配伍方案

牡蛎+海参

含大量锌和精氨酸，
锌是精子“质量检测员”，精氨酸帮助阴茎充血，像给男性性能“充电”。

04

杜仲雄花+桑葚

杜仲缓解腰酸背痛，
桑葚抗氧化保护精子，相当于给下半身“防锈保养”。

05

玛咖+人参组合

玛咖调节激素，人参补充元气，适合压力大导致的“心有余力不足”。

06

葛根+VB族

运动前吃加速供能，性生活前吃促进血液循环，一物两用

07

III 四、肾气平衡调节的核心功效成分

桑葚

含花青素抗氧化，修复睾丸生精细胞，改善少弱精。

龙眼肉

养血安神，中和鹿鞭、人参的燥性，防止上火。

中华鳖血

铁卟啉结构补血养阴，提升血氧饱和度，增强性耐力。

III 四、肾气平衡调节的成分配伍方案

龙眼肉+黄精+中华鳖血

龙眼肉养血防燥，黄精滋阴，鳖血补血，抵消鹿制品、人参的温燥副作用。

黄精+龙眼肉

像空调的“制冷模式”，缓解熬夜、烟酒导致的燥热口干，专门对付腰膝酸软、失眠多梦。

中华鳖血+麦芽糊精

鳖血富含铁元素改善贫血，麦芽糊精缓慢释放能量，适合容易手脚冰凉的虚寒体质。

桑葚+蛹虫草

桑葚补肾阴，蛹虫草补肺气，中医讲究“肺肾同源”，双重调节防上火。

III 五、文献支持

黄精提取物不仅提高睾酮水平和体力，还能改善勃起功能，且对人体无害

Abstract:

An age increase, the concentration of testosterone levels decreased, causing various aging conditions such as physical strength. Among them, the Chinese herb medicine oral Polygonatum (PK) can very well improve the physical strength of elderly people. In this study, we used PK extract to evaluate the effects of PK on men with cardiorespiratory fitness and erection. Subjects were randomly assigned to either the placebo group ($n=25$) or the PK group ($n=25$). The subjects were aged between 50 and 65 years old. The subjects were healthy. Cardiovascular endurance and blood biochemical variables were analyzed at week 0, week 2, and week 4. After the subjects took it for 4 weeks, the results showed that the PK group had a significant increase in cardiovascular endurance without any side effects on liver and kidney function. After taking PK extract drink for 2 to 4 weeks, the cardiorespiratory endurance increased by 23.3% and 28.8% compared to placebo group. PK extract drink increased testosterone and was harmless to human health.

Key words: cardiorespiratory endurance, Chinese herl medicine, erection, polygonatum, testosterone

葛根含有异黄酮（如大豆苷元）能调节激素平衡

The effects of Pueraria mirifica extract, diadzein and genistein in testosterone-induced prostate hyperplasia in male Sprague Dawley rats

Jamaludin Mohamad ¹, Siti Saleha Masrudin ², Zaza
Affiliations + expand

230 *Journal of*

Abstract
Pithecellobium multiflorum (PM) is a medicinal plant native to Thailand contained high amount of phytoestrogen and pheophytinase activity. This study reports the effect of *P. multiflorum* extract, pheophytinase of diadzein and genistein for its benign prostate hyperplasia properties in testosterone-induced prostate hyperplasia in male Sprague Dawley rats. The *P. multiflorum* extract was evaluated for its total phenols, flavonoids and antioxidant activity using DPPH, FRAP and metal chelating assay. The assessment of *P. multiflorum* extract on prostate hyperplasia was performed in testosterone-induced prostate hyperplasia in male Sprague Dawley rats. The total phenol was higher than flavonoid but showed low antioxidant activity of DPPH, FRAP and metal chelating. The aqueous PM extract at 1000 mg/kg significantly reduced the prostate weight in testosterone-induced rats at 15% while diadzein and genistein increased it by 21% and 17% respectively. However levels of FGLC, TC, triglyceride and HDL are not affected by the oral administration of PM, diadzein and genistein to the rats. Similarly, total protein, albumin, globulin, total bilirubin, conjugated bilirubin, alkaline phosphatase, lactate dehydrogenase and glucose-6-phosphate dehydrogenase did not show significant difference as compared with negative control rats. The body weight of the rats, testis, kidney and liver showed no toxic effect. The zinc content increased significantly and the zinc transport genes of ZnT4 and ZIP4 highly expressed suggesting that the PM, diadzein and genistein plays essential role in maintaining the zinc homeostasis. The expression of ZnT4 and ZIP4 genes were significantly reduced indicating functioning in regulation of prostate growth and acts as anti-inflammatory role in preventing BPH. In conclusion, the results indicated that PM reduced BPH and contributed to the regulation in the zinc transport expression of the prostate cells in the benign prostate hyperplasia

Keywords: Antioxidant; Phytoestrogen; Prostate hyperplasia; *Pueraria mirifica*; Testosterone; Zinc transport.

人参中的主要活性成分人参皂苷被发现可增强性欲，改善勃起功能，减少氧化应激

Ginseng and male reproductive function

Kar Wah Leung and Alice ST Wong*

School of Biological Sciences, University of Hong Kong, Hong Kong, PR China

Keywords: ginseng, ginsenosides, sexual behavior, sperm, spermatogenesis, steroid receptor

Abbreviations: ACh, acetylcholine; AR, androgen receptor; CCP, cyclic guanosine monophosphate; CREM, CAMP-responsive element modulator; CP, cyclophosphamide; DA, dopamine; ER, estrogen receptor; GABA, gamma-aminobutyric acid; GDNF, glial cell-derived neurotrophic factor; GR, glucocorticoid receptor; LH, luteinizing hormone; NO, nitric oxide; NOS, nitric oxide synthase; PR, progesterone receptor; ZEA, zeaxanthone

Ginseng is often referred to as the King of all herbs, and is found to be a promising agent to improve general well-being. Ginseng has also been reported as an aphrodisiac, and is used as a traditional medicine to enhance sexual performance and behavior in traditional Chinese medical practices. Data from animal studies have shown a positive correlation among ginseng, libido, and sexual performance. The effects of ginseng on libido are confirmed in case-control studies in human. In addition, ginseng is found to improve the sperm quality and count of infertile men. It is also reported to reduce the incidence of assisted infertility. These actions are mostly attributed to ginsenosides, the major pharmacological active components of ginseng. This review summarizes the current knowledge of the multifaceted effects of ginseng on male reproductive function, and also focuses on its mechanisms of action that may represent novel therapeutic strategies for the treatment of male reproductive diseases or disorders.

"Panax" is given to ginseng by the Russian botanist Carl A Meyer in 1843. "Panax" means "all-healing" in Greek, and "Panax ginseng" is the scientific name of the Asian ginseng. Ginseng has been reported to have diverse physiological effects in many systems, including cardiovascular, immune, and neuronal. It has also been used to enhance sex performance and satisfaction. In this review, we will summarize the recent findings on male sexual performance and spermatogenesis. Recent evidences on its mechanisms of action that may represent novel therapeutic strategies for the treatment of male reproductive diseases or disorders will be discussed.

Sex Performance

Erection

Ginseng is commonly taken by itself or with a herbal formula to enhance sexual performance in traditional Chinese

B Vitamins in the nervous system: Current knowledge of the biochemical modes of action and synergies of thiamine, pyridoxine, and cobalamin

Carlos Alberto Calderón-Ospina¹ | Mauricio Orlando Nava-Mesa²

Abstract
Background: Neurotransmitter Vitamin B₆ plays critical roles in enzymes and beyond in the nervous system. Particularly Vitamin B₆ (thiamine), B₆ (riboflavin) and B₁₂ (coenzyme B₁₂) contribute essentially to the maintenance of a healthy nervous system. Their importance is highlighted by many neurological diseases related to deficiencies in

Correspondence: Dr. Orlando Nava Mesa, Neuroscience Research Group (NRG), School of Medicine, Pontificia Universidad del Rosario, Bogotá, Colombia. E-mail: onava@med.puc.edu.co; monavamug@us.es

Funding Information: This work was funded by Procter & Gamble GmbH, Darmstadt, Germany; a legal entity of Procter & Gamble Health.

Disclaimer: The authors declare that they have no conflicts of interest with respect to their affiliation to organizations or funds that may be perceived as having an interest in the subject of this article.

Acknowledgments: This review focuses on the most important biochemical mechanisms, how they are linked with neurological functions and what deficits arise from malfunctioning of these pathways.

Disclaimer: The authors discussed the main role of B Vitamins on several functions in the peripheral and central nervous system (PNS and CNS) including cellular energetic processes, antioxidant and neuroprotective effects, and both myelin and neurotransmitter synthesis. We also presented the possibility of biochemical synergies between thiamine pyrophosphate and cobalamin and discuss which major roles each of them contribute to the synergy and how these functions are inter-related and complement each other.

Conclusion: Taking into account the current knowledge on the neurotrophic vitamins B1, B6, and B12, we conclude that a biochemical synergy becomes apparent in many different pathways in the nervous system, particularly in the PNS as exemplified by their combined use in the treatment of peripheral neuropathy.

KEY WORDS
B vitamins, biochemical action mechanism, neuropathy, pyridoxine, thiamine, vitamin B12.

Cordyceps militaris (CML), a valuable edible and medicinal fungus, has been used as traditional medicine to treat health conditions, as well as in pharmaceutical in Asian societies for over a century. Due to the high demand, several artificial cultivation methods have been developed. The present study was conducted to evaluate the effects of *C. militaris* on sexual performance and erectile function in rats, and the levels of cGMP and adenosine, as well as its antioxidant effects in diabetes-induced erectile dysfunction (ED). Diabetes was induced by a single injection of streptozotocin (STZ, 60 mg/kg) and maintained for 4 weeks. A daily dose of 1.6–1.6 g/kg BW/day for 2 weeks. Diabetic rats in negative and positive control groups received vehicle and sildenafil citrate (Sildenafil, 10 mg/kg), respectively. The results showed that the erectile function of diabetic rats was significantly increased in diabetic rats, compared with the normal control group. Diabetes rats also showed a significant reduction in the levels of nitric oxide synthase (NOS), and mitochrondrial superoxide dismutase (SOD) activities, when compared to the normal control group. Administration of *C. militaris* significantly increased the levels of NOS, mitochondrial SOD activities, testosterone, and sperms count when compared to the negative control group. The results also showed that *C. militaris* had a significant inhibitory response to electrical stimulation. Moreover, the levels of plasma NOX, testicular SOD activities, testosterone, and sperms count were significantly increased in diabetic rats treated with *C. militaris*, compared to the negative control group. Diabetic rats treated with sildenafil showed a significant reduction in intravaginal frequency and NOS and SOD activities, and the administration of *C. militaris* could possibly through activating nitric oxide production and upregulating oxidative stress to enhance erectile function in diabetic rats.

玛咖能够改善男性健康

Effect of Lepidium meyenii (MACA) on sexual desire and its absent relationship with serum testosterone levels in adult healthy men

G F Gonzales ¹, A Córdova, K Vega, A Chung, A Villena, C Gómez, S Castill
Affiliations + expand

Abstract
This study was a 12-week double blind placebo-controlled, randomized, parallel trial in which active treatment with different doses of Maca Gelatinizada was compared with placebo. The study aimed to demonstrate if effect of Maca on subjective report of sexual desire was because of effect on mood or serum testosterone levels. Men aged 21-56 years received Maca in one of two doses: 1,500 mg or 3,000 mg or placebo. Self-perception on sexual desire, score for Hamilton test for depression, and Hamilton test for anxiety were measured at 4, 8 and 12 weeks of treatment. An improvement in sexual desire was observed with Maca since 8 weeks of treatment. Serum testosterone and oestradiol levels were not different in men treated with Maca and in those treated with placebo (P.N.S.). Logistic regression analysis showed that Maca has an independent effect on sexual desire at 8 and 12 weeks of treatment, and this effect is not because of changes in either Hamilton scores for depression or anxiety or serum testosterone and oestradiol levels. In conclusion, treatment with Maca improved sexual desire.

Abstract

Oysters have been thought to significantly improve the male sexual function for thousands of years. To explore the effects of an enzymatic hydrolysate of oyster preparation on erectile dysfunction (ED), hemicastrated male rats were divided into control, positive control and oyster hydrolysate high dose group (0.617 g/kg body weight per day), medium dose group (0.308 g/kg) and low dose group (0.103 g/kg), respectively. After castration, the growth rate of the testes was significantly inhibited. The testicular glands and seminiferous organs of the rats were significantly decreased than those of normal rats. Oyster hydrolysate significantly shortens the latency of penile erection induced by electrical stimulation in a dose-dependent manner, indicating that oyster hydrolysate also has significant effects on alleviating ED. Furthermore analysis revealed that the serum levels of testosterone and luteinizing hormone (LH) were higher in the high dose oyster hydrolysate group than in the model group, and were similar to those in the normal control group, indicating that oyster hydrolysate promotes the synthesis of testosterone by stimulating the synthesis of luteinizing hormone, which then increased the serum NO content through the NO-cGMP signaling pathway.

鹿鞭提取物可提高睾酮水平，改善精子质量

Effects of velvet antler polypeptide on sexual behavior and testosterone synthesis in aging male mice

Zhi-Jun Zang^{1,*}, Hong-Feng Tang^{2,*}, Ying-Tao³, Wei-Jie Xing⁴, Su-Yun Ji⁵, Yong Gao⁶, Chun-Hua Deng⁷
+ Author information Article notes Copyright and License information
PMCID: PMC4955189 PMID: 26608944

Abstract

Twenty-four-month-old male C57BL/6 mice with low serum testosterone levels were used as a late-onset hypogonadism (LOH) animal model for examining the effects of velvet antler polypeptide (VAP) on sexual behavior and testosterone synthesis. The VAP-treated mice were given 5 consecutive weeks by daily gavage at doses of 100, 200, or 300 mg kg⁻¹ body weight per day ($n = 10$ mice per dose). Control animals ($n = 10$) received the same weight-based volume of vehicle. Sexual behavior and testosterone levels in serum and interstitial tissue of testis were measured after the last administration of VAP. Furthermore, to investigate the mechanisms of how VAP affects sexual behavior and testosterone synthesis *in vivo*, the expression of hypogonadal marker genes (Cyp19a1, P450ccc, and 3β-hydroxysteroid dehydrogenase (3B-HSD) in Leydig cells was also measured by immunofluorescence staining and quantitative real-time PCR. As a result, VAP produced a significant improvement in the sexual function of these aging male mice. Serum testosterone level and intratesticular testosterone (ITT) concentration also increased in the VAP-treated groups. The expression of STAR, P450ccc, and 3B-HSD were also found to increase in the VAP-treated group compared with the control group. Our results suggested that VAP was effective in improving sexual function in aging male mice. The effect of velvet antler on sexual function was due to the increased expression of several rate-limiting enzymes of testosterone synthesis (STAR, P450ccc, and 3B-HSD) and the following promotion of testosterone synthesis *in vivo*.

Abstract

High-fat diet (HFD)-induced obesity represents a significant challenge to male reproductive health, especially sperm production and quality. Thus, there is a need to evaluate current evidence regarding mulberry (*Morus alba* L.) fruit extract's therapeutic potential for HFD-induced male reproductive dysfunction. Through comprehensive analysis of the peer-reviewed literature from multiple databases (Published: Web of Science, and Google Scholar, 2005–2024), it was evaluated that mulberry's effects on the testicular morphology, spermatogenesis, sperm parameters, and the underlying molecular mechanisms. Mechanistic studies reveal that standardized mulberry extract mediates protective effects through multiple pathways, including antioxidant, anti-obesity, anti-NO_x, and anti-inflammatory actions. Glutathione and inflammatory cytokines (TNF- α ; ~64%, IL-6; ~45%, and NF-κB signaling (~42–33%). These effects are facilitated by mulberry's rich polyphenolic profile, particularly (-)-catechin (2–20 mg/g dry weight) and ellagitannins (1–6 mg/g dry weight). This review demonstrates particular efficacy in preserving seminiferous tubule integrity and maintaining blood-testis barrier function, with treated groups maintaining up to 85% of normal tubular architecture compared to HFD controls. Key molecular mechanisms include anti-oxidative, anti-inflammation, and anti-obesity effects. There was a significant increase in mtDNA copy number, and epigenetic regulation of metabolic pathways. Temporal analysis indicates optimal therapeutic effects after 28 days of treatment, with initial improvements observable within 14 days. While the potential mechanism of action is promising, including the need for standardized protocols and lack of standardized extraction protocols. Future research priorities include well-designed human clinical trials, standardization of preparation methods, and investigation of potential synergistic effects with other therapeutic agents. This comprehensive review indicates that mulberry extract is a promising therapeutic candidate for this obesity-related male infertility, warranting further clinical investigation.

Abstract

Eucommia ulmoides Oliver is a native plant and valuable tonic Chinese medicine in China with a long history great economic and comprehensive development potential. Traditionally, the comprehensive utilization of *E. ulmoides* Oliver still has a low rate, only bark has been used as medicine and other parts of *E. ulmoides* Oliver cannot be fully utilized, even the leaves have been well utilized in food products in Japan in the past decades. In order to improve the comprehensive utilization efficiency of *E. ulmoides* Oliver, in this paper, we summarized the chemical constituents, biological functions, and pharmacological effects in different parts of *E. ulmoides* Oliver. The findings suggest that other parts of *E. ulmoides* Oliver could replace the bark of *E. ulmoides* Oliver to some extent besides of their respective applications. The unique and extensive physiological functions between different parts of *E. ulmoides* Oliver indicate that the comprehensive utilization of *E. ulmoides* Oliver has a wide space to develop, which is also an effective way to protect *E. ulmoides* Oliver resources and improve its utilization rate.

海参提取物对男性生殖健康具有积极作用

Protective effects of sea cucumber (*Holothuria atra*) extract on testicular dysfunction induced by immune suppressant drugs in Wistar rats

D Y Saad^{1,2}, M M Soliman^{1,3}, A A Mohamed^{4,5}, G B Youssef⁶

Affiliations + expand
PMID: 29687464 | DOI: 10.1111/and.13017

Abstract

The current study was aimed to evaluate the protective effect of Holothurian atra (HA) extract; naturally occurring marine resource, against methotrexate (MTX) induced testicular dysfunction. Mature rats received either MTX (20 mg/kg, intraperitoneally) or saline on the 7th day of experiment design. Seven days prior and after MTX-injection, rats received HA at dose of 300 mg/kg intragastrically (HA + MTX group; HA group alone). Serum was extracted and testicular tissues were examined for the changes in serum biochemistry (liver & kidney biomarkers, testicular hormones and antioxidants), molecular and histopathological alterations using RT-PCR and immunohistochemistry. MTX-injected rats demonstrated significant increase in serum levels of interleukin-6 (IL-6), tumour necrosis factor alpha (TNF- α), interferon-gamma (IFN- γ), reproductive hormones (FSH, LH and testosterone) and antioxidants GST, SOD and catalase. MTX-injected rats down-regulated mRNA expression of GST, SOD, steroidogenesis associated genes, IFN- γ , Bcl2 and NFKB. MTX up-regulated Bax expression and caspase 9 immunoreactivity that were ameliorated in HA + MTX group. Collectively, HA ameliorated and restored all altered genes, in conclusion, HA is a promising supplement that is helpful in protection against testicular cytotoxicity and dysfunction induced by methotrexate.

Abstract

Longan (*Dimocarpus longan* Lour.), as an edible fruit and traditional Chinese medicine, has been consumed for thousands of years. Longan pulp has abundant nutritional phytochemicals such as protein, carbohydrate, vitamin C, polysaccharides, polyphenols, which shows multiple biological activities including antioxidant, immunomodulatory and antimutant effects. Longan pericarp also demonstrates biological activities because of its rich content of polysaccharides and polyphenols. This review summarizes the bioactive compounds and bioactivities of longan pulp and aims to provide comprehensive information for future development of longan as a functional health food.

PART 03

与传统补肾产品对比优势

针对不同人群

运动人群需要抗疲劳和耐力增强；
中年男性关注体能和性能；
特殊职业如体力劳动者需要抗疲劳等，
本产品定位优于、广于单纯壮阳产品。

效果周期

新帝王神：3-7天（肽类直接吸收）

传统补肾：2-4周（药材缓释）

作用机制

新帝王神：神经--内分泌--血管（三重调节）

传统补肾：单一补肾阳

安全性

新帝王神：特殊膳食认证

传统补肾：可能存在部分食动物激素风险

PART 04

成分配方的优势

“药食同源”科学配伍

融合12+种滋补食材（如中华鳖、鹿尾），传统验方结合现代酶解技术（肽类成分），生物利用率提升3倍以上。

安全平衡设计

温补成分（鹿制品）与滋阴成分（桑葚、龙眼）配伍，避免传统壮阳产品的上火问题。

中西融合增效

传统滋补（如黄精滋阴）+现代活性肽（如鹿鞭肽促睾酮），实现“标本兼有”。

君臣佐使架构

君药：鹿鞭肽+人参（大补元阳）
臣药：牡蛎+黄精（滋肾填精）
佐使：葛根+VB族（活血通络+能量代谢）
→符合《景岳全书》“阳中求阴”理论，
避免壮阳伤阴。

多靶点覆盖

同时调节内分泌（睾酮）、血液循环（一氧化氮）、神经敏感度（多巴胺），解决复杂功能障碍问题。

双效快速+持久

VB族+人参较快起效（运动/性活动前），
黄精+鹿血长期调理基础代谢

PART 05

原材料生产工艺

III 原材料生产工艺

小分子活性肽

将牡蛎、鹿鞭中的营养提取物精研至2~15个氨基酸组成的小分子活性肽。此项工艺可以保持营养物质的高活性。不但无需再次消化，可快速透过小肠黏膜吸收，而且能直接进入人体细胞内，激活生物活性。可以快速、直接的调节和增强体内各个、细胞系统的生理功能！

专利超微片剂生产技术

所制的冻干粉和粉剂的精度，可达100-120mg。各种有效成分的配比，更加符合人体吸收的效率。

III 原材料生产工艺

粉剂

将不适宜冷冻干燥的原材料，祛除杂志，提取精华，再干燥后精细研磨成粉剂。尽可能的在保留原材料中的营养成分的基础上，帮助人体吸收。

冻干粉

采用国际先进的<冷冻干燥机的真空冷冻干燥法>和<低温气流粉碎技术>预先将药液里面的水分冻结，然后在真空无菌的环境下将药液里面被冻结的水分升华，从而得到冷冻干燥而成的冻干粉。因为在低温环境下抽干药液里面的水份，可以保留其原有生物活性物质的作用。

PART 06

适用不同人群和效果总结

III 一、适用不同人群

上班族/脑力劳动者

上午吃2片，下午不“钓鱼”，加班到10点还有精力陪老婆

健身党/运动爱好者

健身前吃2片，突破战绩不抽筋，爆发力和耐力更强

中年夫妻力不从心

睡前吃2片，老婆嘀咕“最近状态不一样了”

III 二、效果总结

耐力提升 = 能量 + 氧气双管齐下

发电站（能量）：VB族把吃的饭变成电量，人参是“充电宝”延长续航

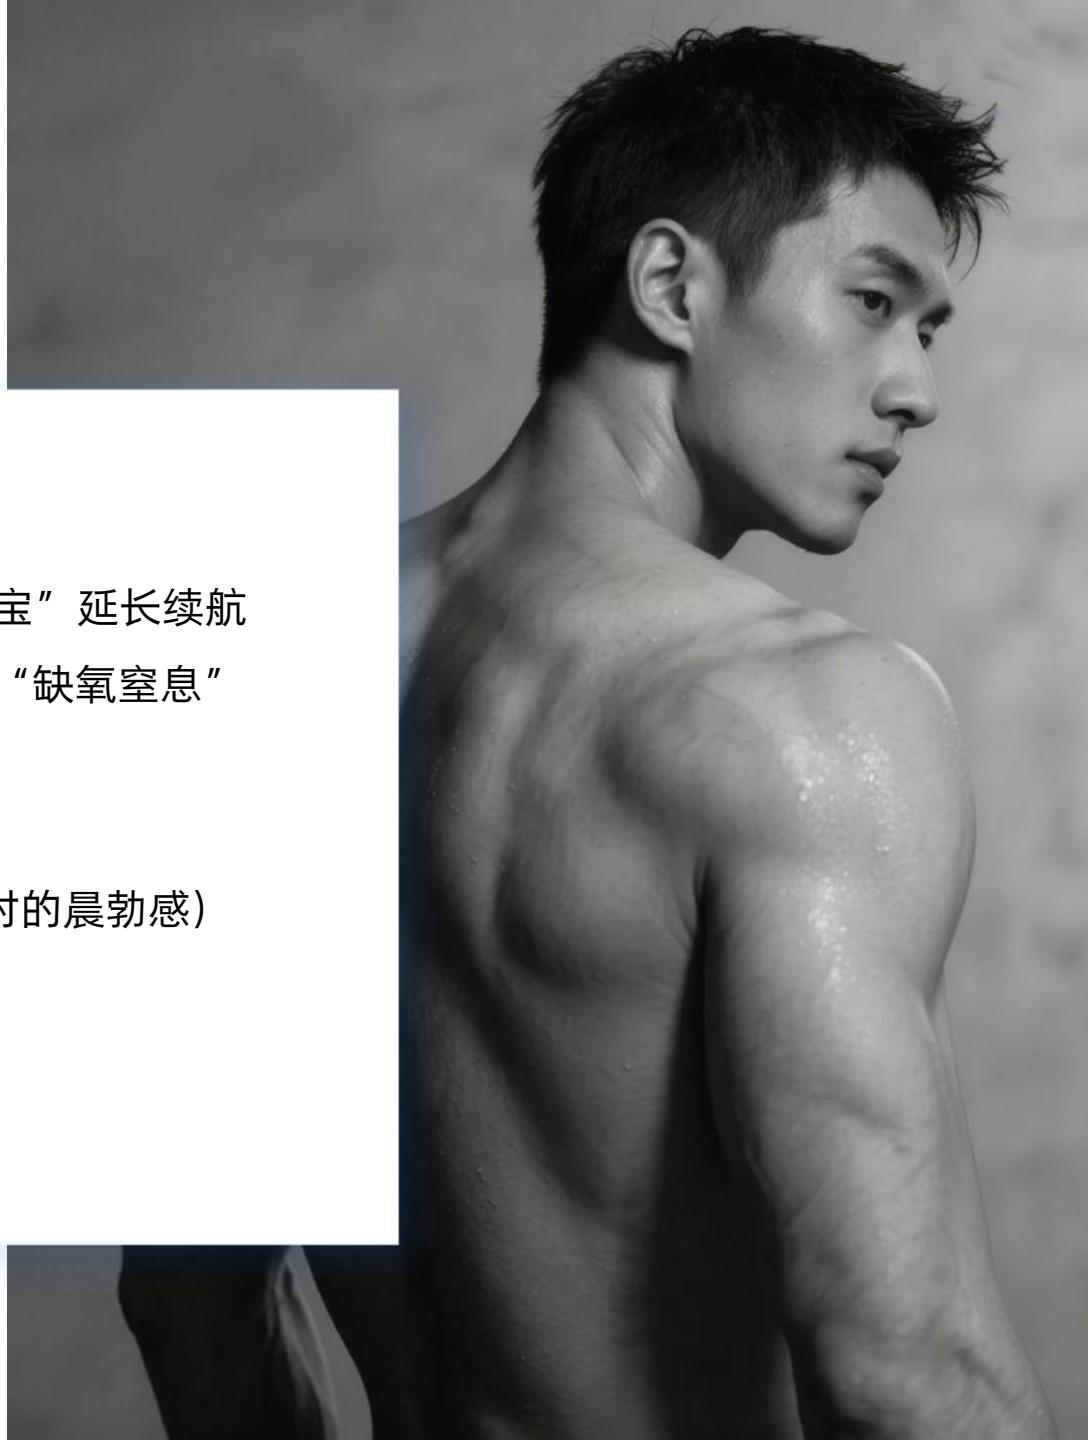

送氧队（抗疲劳）：鳖血携氧 + 葛根扩血管 = 全身细胞不“缺氧窒息”

男性功能 = 血流 + 激素 + 神经三重奏

油门（激素）：鹿鞭肽刺激睾酮分泌，欲望飙升（像年轻时的晨勃感）

输油管（血流）：牡蛎肽放松血管，丁丁充气变硬

刹车片（控敏感）：杜仲雄花延长战斗时间（告别3分钟）
